

AMENDMENTS TO THE SPECIFICATION

Please replace Paragraph [0037] with the following paragraph rewritten in amendment format:

[0037] Bushings 84 include a large diameter portion 94 which provides a first clearance between bushing 84 and flange portion 80 and a small diameter portion 96 which provides a second clearance between bushing 84 and flange portion 80. The second clearance being greater than the first clearance. The relative diameters of large diameter portion 94 and the diameter of opening 82 will be such as to allow sliding movement therebetween yet effectively resist radial and/or circumferential movement of non-orbiting scroll member 66. Large diameter portion 94 is located at the upper side or top of bushing 84 in order to move the centroid of reaction for bushing 84 away from the tip of wrap 68 of non-orbiting scroll member 66.
